SERVICE SHEET

No. 88

A GROUP CONNECTING RODS.

To ensure satisfactory locking of the self locking nuts now used on all A Group models, it is essential that the bolt protrudes through the nut when fully tightened. Under no circumstances should washers be used under nuts and the use of incorrect bolts must be avoided. Failure to ensure a proper assembly will result in nuts working loose.

Correct bolts with lengths under heads are as follows:-

<u>Spares No.</u>	<u>Length under head.</u>	<u>Model.</u>
11867-1535	2.480"/2.490"(2.31/64"nom.)	A7, A7SS.
11867-1536	2.580"/2.600"(2.19/32"nom.)	A10, A10 S/R, A50, A65
