

HINTS AND TIPS ON — SERVICE —

For **BSA** and **ARIEL** Dealers

Service Bulletin #114

November 9, 1961

ASSEMBLY OF NEW SIAMESED EXHAUST PIPES

Many BSA Dealers are now receiving delivery of 1962 Super Rockets having the new "Power Jet," or siamesed exhaust pipe.

The new pipes are tuned to the new larger silencer, and the Factory states that this new development is responsible for allowing the engine to develop from three to four extra horsepower.

Pipes should be sealed with Cement when installing. We recommend the application of a Cement defined as follows:

MAGIC MUFFLER SEALER
MANUFACTURED BY
MAGIC IRON CEMENT COMPANY
CLEVELAND, OHIO

You should be able to get this cement from your local auto parts wholesaler or auto supply store.

Apply Cement to pipes where they enter the cylinder heads and to the joint where the two pipes meet.
