Twin Leading Shoe Back Plate Assemblies are designed and manufactured by Jim Robinson of Birmingham, and we are the Sole Distributor for these replacement assemblies for production machines. Jim also manufactures a range of Racing hubs for Road racing, moto-cross, Grass Track and Speedway. For details write direct to J. F. Robinson, 39 Sutton Road, Erdington, Birmingham, 23.

DUETTO 2 L.S. Brake plates are direct replacements and do not involve any modifications. A Brake cable is supplied to fit the most common types of handlebar lever. It will be appreciated however that in some cases it may be necessary to change the nipple to suit the lever.

DUETTO back plates are Sand cast and heavily webbed and strengthened at the pivot and cam posts. Air Scoops are cast in and protected with Alloy mesh. The brake operation is by two precision ground cams, the shoes each mounted on a fixed pivot. The Dural linkage has a single adjuster to synchronise operation.

DUETTO 5
